

How to start the program.
Read Everything!

Step1: Plug in the monitor and the Raspberry pi
- The startup to the pi should commence

Step2: Open the terminal application
- Put cursor to the bottom left corner of the screen. The start menu will pop up (it auto hides)
- Navigate to accessories then you should see 'Terminal' in the window that pops up
- click on terminal and it will open

Step 3 : Run The program
- Write in this
- python3 speech_banana/run.py

Step 4: Maximise the window and full screen

(Try and remember all the instructions as you wont be able to get back to this window when the screen is maximised)

- On the top right corner of the window there are: Arrow down, arrow up and x. Press arrow up. This will maximise the window
- Now we need to remove the top header
- Right click on the header, you can find the text 'pi@raspberrypi'.
- From the drop down menu click on 'UN/Decorate'. This will remove the header. The console should be completely full screen now.

Step5 ????

Step6: Profit

- The program is now working :D
- Enter in some text and press enter to check it is working
- and Please remove the mouse, it is plugged around the back, you can leave it in the box

any dramas and call Rob
